HAN-L5/3

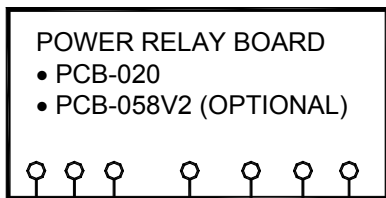

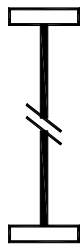

Description.

The HAN-L5/3 is a versatile air conditioning system controller suitable for use with any cool only, cool electric/electric heat or reverse cycle (heat pump) or split or packaged air conditioner. It is also suitable for use with chilled/hot water fan coil units or chilled water electric heat fan coil units.

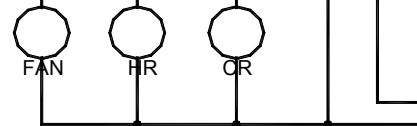

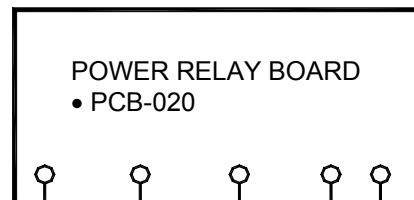

The HAN-L5/3R is for use in hotels – resort – serviced apartments where basic easy to use functions are required. The control is pre-programmed for auto change over from cool to heat. The room occupant has only to turn the control on and set the required temperature.

Several power relay modules are available for use with both models depending on the installation requirements.
