

“IR-2001” SERIES WIRELESS MICROPROCESSOR AIR CONDITIONING CONTROLLERS.

The Hanwest “IR-2001” series air conditioning controllers offer a new level of convenience for apartment or home owners with central air conditioning systems. A hand held easy to use remote transmitter with a backlit LCD display is used to set & control all air conditioner functions. The LCD remote control operates in conjunction with an unobtrusive wall mounted receiver indicator panel. The panel incorporates an On/Off switch & LED indicators for Power On / Heat / Cool & Compressor operation.

Wall mount receiver indicator panel

A single wall receiver indicator panel is supplied as standard. Additional wall receiver indicator panels may be installed to allow control of the air conditioning from as many rooms as required. Where night & day zones are installed, local control in either zone can be carried out by installing an additional receiver indicator panel.

The air conditioning system can be turned On/Off from the IR-2001 remote control or by the On/Off key on the receiver wall panel.
