

## PCB-182 FLOW SWITCH MODULE PRODUCT BULLETIN

### ADDITIONAL INTERFERENCE PROTECTION FOR HANWEST PCB-182 FLOW SWITCH MODULE

In some installations it is possible for external RFI/EMI and noise in power circuits to affect the controls performance. Ring type ferrite cores can be fitted for the effective noise reduction in power circuits and can be fitted to eliminate unwanted RFI/EMI.

Install one ferrite core on the line to the PCB-182. Use a cable tie on each side of the ferrite core to hold it in position. A second ferrite core can be installed on the neutral wire from the PCB-182.
